

R Vinylefx®
METALIZED VINYL

By courtesy of NOVA PRISMA DIGITAL S.L. – Barcelona tourist bus covered with VINYLEFX® DURABLE SMOOTH SILVER. Printed on AGFA TITAN HS with original inks and laminated with a matte clear polymeric film.

Indoor Decorative Vinyl

RTape Vinylefx® films are used to produce eye-catching decorative graphics. They can be plotter cut, screenprinted and also printed using digital eco-solvent and solvent based ink systems. Vinylefx® installs just like other vinyl films and can be applied to flat and slightly curved surfaces. Typical applications include Point-of-Purchase posters, tradeshow graphics, retail display and decorative signage. Vinylefx® offers indefinite indoor life with proper care and handling.

Outdoor Durable Vinyl

Outdoor Durable Vinylefx® is designed for digital printing and plotter cutting. The films offer up to 3 years exterior life if correct installation procedures are followed and the product is suitable for the intended application. The exterior films are widely used for vehicle graphics and shop window designs. We recommend that all exterior applications are edge sealed (with our Seal-it Pen) to ensure optimum service life. Please see our website for details on application and helpful tips and tricks.

Print methods digital ink-jet

Vinylefx® films are printable using a wide range of digital printing technologies. Water-based inks will not adhere properly. Always test the vinyl with the ink system prior to production. Print Vinylefx® using a profile for White Intermediate High Gloss Vinyl at lower temperatures (35-40 °C). Settings may vary from one printer to another and from one ink system to another.
