

DECLARATION OF COMPLIANCE FOR SEMI-FINISHED PRODUCTS INTENDED TO COME INTO CONTACT WITH FOOD**Date of issue: 27-08-2026**

Vink Plast ApS hereby declare that:

“PVC Flex” Sheets and finished parts machined from these products by Vink Plast ApS:**European Union**

- Comply with declaration 681/2020/DK
- comply with the requirements of Regulation EC 1935/2004, dated October 27, 2004
- comply with the applicable requirements of Regulation (EU) No 10/2011 of 14 January 2011, Regulation (EU) No 2020/1245 of 2 September 2020 and Regulation (EU) 2025/351 of 21 February 2025
- are manufactured in accordance with Good Manufacturing Practice (GMP) as set out in Regulation EC 2023/2006, dated December 22, 2006.

Compliance with overall migration

The above-mentioned product has been independently tested for overall migration with the simulants and test conditions listed below as defined in Regulation EU 10/2011. The product was exposed to each simulant three times to comply with repeated use requirements.

The overall migration results were found to be below the limits defined in Regulation EU 10/2011, which is currently defined as 10 mg/dm², in the following test conditions:

Simulant	Contact time and temperature	Intended use
Acetic acid 3%	30 min at 40°C	For repeated use
Ethanol 10%	30 min at 40°C	For repeated use
Ethanol 20%	30 min at 40°C	For repeated use

Conditions of use

The product is suitable for repeated use applications only and is not intended for single use applications such as food packaging.

The products may only be used for purposes that meet the test conditions, simulants, and contact durations mentioned above. Contact with fatty food is generally prohibited unless the buyer can demonstrate the product's suitability for the specific intended use.

The products are sensitive to UV radiation and heat, which can damage them. Therefore, it is essential not to expose them to UV radiation or temperatures exceeding 30°C. If the product yellows, indicating advanced degradation, it must no longer be used, as the potential increase in migration could render the product unsuitable for food contact.

Responsibility on the part of the Purchaser

As a semi-finished product, it is the purchaser's responsibility to verify the suitability of the plastic material components made for or from our products for the intended use in the food preparation area:

- whether the physical characteristics of the plastic material are appropriate for the intended food,
- compliance with the migration limits,
- possible influence of the material on the chemical characteristics of the food,
- compliance with the requirements of statutory regulations,
- the need for appropriate cleaning of the produced work pieces prior to the first contact with food⁽¹⁾,
- to note in writing the complete restrictions of use related to the intended application to the user.

Substances not intentionally added (NIAS), impurities:

None could be identified.

It is the purchaser's responsibility to ensure traceability of the material during any subsequent use up to and including the finish product, as well as the equipment in which it is assembled.

Validity of the declaration:

This declaration of compliance relates exclusively to the product specified herein in the condition in which it was placed on the market. Any additional components, handling operations or modifications carried out subsequently are expressly excluded. The present declaration ceases to be valid in the event that the use of the product is not in compliance with local regulations or with the declaration by EXTRUFLEX.

This declaration of compliance is only valid for the semi-finished products that bear the EXTRUFLEX logo and the label 'Food Contact Flex Vinyl' with the unique production identification of the roll that allows traceability of the product.
