

REACH DECLARATION

24.02.2025

In connection with the implementation of the EU Regulation 1907/2006 concerning REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) which came into force on June 1, 2007, we would like to inform as follows:

Vink Plasts programme consists of semifinished materials made of polymers. According to the REACH Regulation EU 1907/2006 and latest amendments, polymers is not subject to any registration obligation as the regulation distinguishes between articles and substances. The REACH regulation applies to chemicals and polymers are explicitly exempt from registration.

As a downstream distributor of semifinished polymers within the value chain we don't have any registration obligation, but we assure, that our suppliers always informs us, if changes in the SVHC list has any influences on the raw materials used in the production of the semifinished products Vink Plast is bringing to the market. At the moment we can inform about the following registrations:

According to Article 33 of the REACH regulation EU 1907/2006 that the following PVC types:

- PVC-U (Rigid PVC CAW) ¹⁾
- PVC-C
- PVC foam

Contain more than 0,1 % of the following substance:

- Dioctyltin derivates (DOTE) CAS number: 15571-58-1

There are no special precautions required in handling the item because the substance is firmly embedded in the plastic and will not be released under normal conditions of use. Due to informations from our suppliers we declare, that all used of raw materials is – if necessary – registered and assessed at the European Chemicals Agency and, if required, registered in the SCIP-Database.

We don't expect that materials in our delivery programme will be removed from the programme due to REACH restrictions. This declaration will not be updated with each new amendment to EU 1907/2006, but only if any restrictions on the raw materials used for production of the polymers will be implemented in the SVHC list.
